What is iGOT Karmayogi ecosystem ?

- *iGOT Karmayogi is a online learning/training platform for Government employees , where different courses and learning resources are available hain.*

What is the Problem Statement ?

- Firstly In Government ,statistical officers/employees need to learn , new skills time to time— like:
  - Python
  - AI/ML
  - Data Analysis
  - GIS
  - Statistics
  - Cloud
  - Cybersecurity etc.
- And here our problem starts , that he /she does not know which skill should be learn.

What is the Problem Statement ?

- So our AI platform , will see employee :
  - Employee ka role + experience + current skills + previous training
- ⬇️
- Then Our AI Decides:
- ⬇️
- **“Which iGOT course is best for a particular user.”**

What is the Problem Statement ?

- Second problem is **pdf** .
- So our system should be **intelligent layer** above **iGOT.**

Main Idea of our System

- Our System backend will take information from iGOT like:
  - Available courses
  - Course details
  - Relevant learning modules
  - Enrolments status
  - Course completion status
- Then our AI will decide :
- **“According to particular employee’s skill gap which iGOT course should be recommend .”**

Our Idea

- **StatSkill** AI is a smart platform that Understand each and every skill of government statistical officers, and identify thereskill gaps.
- Suggest personalized training **iGOT Karmayogi** + **NSSTA/TPAC** , and checks that skills are improving via AI quizzes and practical assessments.

Our Idea

- **StatSkill** AI is a smart platform that Understand each and every skill of government statistical officers, and identify thereskill gaps.
- Suggest personalized training **iGOT Karmayogi** + **NSSTA/TPAC** , and checks that skills are improving via AI quizzes and practical assessments.

Our Idea

"We don't measure whether training is completed, we measure whether competency is achieved."

Key Components (What makes it unique)

1. **Competency Digital Twin**
   A live profile of each official showing current skill levels in different areas. It keeps updating after every learning and assessment.
2. **Skill Gap Engine**
   AI compares current skills with role requirements and finds the most important gaps.
3. **Skill Mission Generator**
   AI creates a step-by-step learning path using iGOT courses, NSSTA/TPAC programmes and internal learning material.
4. **Skill Proof Engine (AI Assessments)**
   AI generates MCQs and quizzes from uploaded content and also gives practical tests to check real understanding.
5. **Competency Update & Future Skills**
   After assessment, skill levels are updated and AI suggests the next mission. It also shows future skills needed for career growth.
6. **Dashboards**
   Employees see their progress and missions. Admins see organization skill heatmap and training effectiveness.

VALUE TO STAKEHOLDERS

- **For Employees** — Personalized learning, clear growth path, real skill improvement
- **For Administrators** — Data driven insights, better training planning, skill gap visibility
- **For Government** — Future ready workforce, better decision making, strong statistical system
- **For Nation** — Accurate data, bett policies, stronger development impa
